

α -L-ARABINOFURANOSIDASE from *A. niger* (Lot 150601d)

E-AFASE

(EC 3.2.1.55) alpha-L-arabinofuranoside, arabinofuranohydrolase
CAZy Family: GH51
CAS: 9067-74-7

08/19

PROPERTIES

1. ELECTROPHORETIC PURITY:

- Single major band on SDS-gel electrophoresis (MW = 62,000)
- Single major band on isoelectric focusing (pI < 3.0)

2. SPECIFIC ACTIVITY:

32 U/mg protein (*p*-nitrophenyl- α -L-arabinofuranoside) at pH 4.0 and 40°C

One Unit of α -L-arabinofuranosidase activity is defined as the amount of enzyme required to release one μ mole of *p*-nitrophenol (*p*NP) per minute from *p*-nitrophenyl- α -L-arabinofuranoside (5 mM) in sodium acetate buffer (100 mM), pH 4.0 at 40°C.

3. SPECIFICITY:

Hydrolysis of α -1,2- and α -1,3-linked L-arabinofuranose residues from arabinoxylans and branched arabinans. Hydrolyses α -1,5-linked arabino-oligosaccharides at a much lower rate.

4. SPECIFIC ACTIVITY:

Substrate	%
<i>p</i> -Nitrophenyl- α -arabinofuranoside	100
1,5- α -L-Arabinotriitol	22.10
Sugar-beet arabinan	39.30
Wheat flour Arabinoxylan	2.19
Debranched Sugar-beet arabinan	1.25
CM-Linear Arabinian	< 0.003
Xylan Beechwood	< 0.03

Action on *p*NP-substrates and polysaccharides or oligosaccharides was determined at a final substrate concentration of 2.5 mM and 5 mg/mL, respectively, in sodium acetate buffer (100 mM), pH 4.0 at 40°C

5. PHYSICOCHEMICAL PROPERTIES:

Recommended conditions of use are at pH 4.0-4.5 and up to 60°C

- pH Optima: 4.0
- pH Stability: 3.5-5.0 (> 75% control activity after 16 h at 4°C)
- Temperature Optima: 40°C (10 min reaction)
- Temperature Stability: up to 60°C (> 75% control activity after 15 min incubation at temperature)

6. STORAGE CONDITIONS:

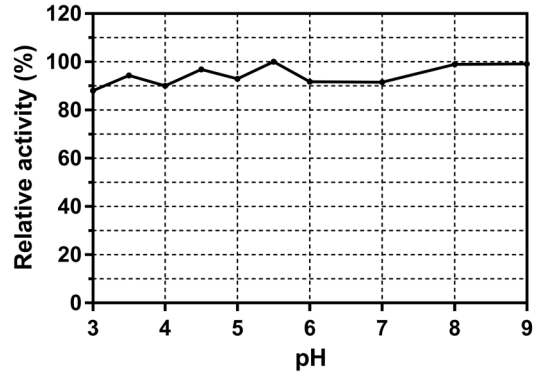

The enzyme is supplied as a suspension in 3.2 M ammonium sulphate containing 0.02% (w/v) sodium azide and should be stored at 4°C. For assay, this enzyme should be diluted in sodium acetate buffer (100 mM), pH 4.0. **Swirl to mix the enzyme immediately prior to use.**
