Certificate of Analysis

Product: Isoamylase HP (Glycogen 6-glucohydrolase)
Cat. No: E-ISAMYHP
Lot. No: 130101E
Expiry Date: December, 2024

Specific activity and level of other activities:

240 U/mg protein (on oyster glucogen) at pH 4.0 and 40°C

One Unit of isoamylase activity is defined as the amount of enzyme required to release one μ mole of reducing sugar per minute from oyster glycogen (10 mg/mL) in sodium acetate buffer (100 mM), pH 4.0 at 40°C. One Unit as defined here is approximately equal to 67 KU as defined by Sigma for Isoamylase (rice starch as substrate at pH 3.5 and 40°C).

Enzyme Activity	Substrate	%
Isoamylase	Oyster glycogen	100
α -Amylase	Reduced maltoheptaose	< 0.0004
Maltase	Maltose	< 0.0004
<i>exo</i> - α -Glucanase	Linear- α -1,4-maltodextrins	< 0.0000004

Actions were determined at 40°C and pH 4.0. α -Amylase was measured by monitoring hydrolysis of maltoheptaose by HPLC using a Waters Sugar Pac[®] column. Incubation of 100 U of isoamylase with 0.2 mL of maltoheptaose (10 mg/mL) at pH 4.0 resulted in no production of low molecular weight oligosaccharides in 16 h. Maltase (α -glucosidase) was measured with maltose (10 mg/mL) as substrate and *exo*- α -glucanase was measured with linear- α -1,4-maltodextrins (10 mg/mL) as substrate with measurement of released D-glucose.

This lot meets our specification.
